

1) Objective

The requirement is to create three pages to:

- a) Show all Stores
- b) Show Details of one particular store
- c) Enter new store by user

2) Stepwise proceed

- a) Created a page (/allstores) to populate a table from the enteries in database-table.
- b) Created a page with three divisions which were used for:
 - (1) Displaying thumbnails
 - (2) Displaying store location
 - (3) Displaying store details
- c) Used <a> tag to display the image in thumbnail upon click
- d) Created a dropdown populated with the names of the stores present in database which upon select redirects to the page containing details of that particular store.
- e) Got details from views.py and updated the page accordingly with the data received as per the store selected in the previous page.
- f) Created a webpage (/newstore) to enter new enteries to the database.
- g) Created a button in “/allstores” page to take us to “/newstore”.
- h) Created models in models.py to access the database entries
